Assignment

Create a simple React events application on the code sandbox platform using React and any API library of your choice (e.g. axios, fetch, etc.) to access endpoints that will **load** events, **create** a new one, **update** an event, and finally **delete** one. Don't spend too much time on styling and concentrate on the tasks below.

Acceptance Criteria

- A page to show a list of events. Display the name, description, company.
- A form to add a new event and update the list after addition. At a minimum, save these fields: name, description, company, color (any web safe named color, like red).
- A delete link/button to remove an event and update the list after deletion.
- Demonstrate error handling methodologies to account for API failures. Please note that you may not see any errors from the API during this exercise.
- Sort by company name after loading.
- Update an event. At a minimum, update the name, description, company, color.
- Load and display individual event info (name, description) in a modal or on a new page with the use of react-router.
    - You can use any modal library that you would like.
- Validate Inputs

API

Endpoints (all contain the same data)
https://rf-json-server.herokuapp.com/events/
https://rf-json-server.herokuapp.com/events-2/
https://rf-json-server.herokuapp.com/events-3/
https://rf-json-server.herokuapp.com/events-4/
https://rf-json-server.herokuapp.com/events-5/

Use the methods below to communicate with the server. Please make sure **"Content-Type": "application/json"** is used in the header if your requests don't work.

GET https://rf-json-server.herokuapp.com/events/
Get a list of all events

GET https://rf-json-server.herokuapp.com/events/{**id**}
Get a single event

POST https://rf-json-server.herokuapp.com/events/
Create a new event. Here is an example payload. Don't send the id as it will be automatically generated.

```
{
   "color": "red",
   "isActive": true,
   "name": "Event 1",
   "date": "2021-01-05",
   "time": "06:56",
   "company": "GEEKFARM",
   "email": "wallsschwartz@geekfarm.com",
   "phone": "+1 (831) 446-3332",
   "address": "697 Brooklyn Road, Northridge, Tennessee, 186",
   "description": "Cillum exercitation dolore do eiusmod elit exercitation. In culpa amet officia cupidatat nostrud excepteur dolore aliqua laboris anim nostrud ut.",
   "image": "https://placeimg.com/320/240/arch",
   "createdOn": "2020-09-05T03:56:56 +06:00"
 },
```

PUT https://rf-json-server.herokuapp.com/events/{**id**}
Update an event. The server does not have strict validation rules. Make sure to send at least the name, description, company, color.

DELETE https://rf-json-server.herokuapp.com/events/{**id**}
